

OPERATION: LAST CALL — LotL Hunt Card

.conf26 hands-on workshop · Sable Vector vs Barrel and Signal · hunt behaviour, not binaries — search All time

#	Move	SPL	The tell
0	Baseline PEAK Prepare	index=sysmon EventCode=1 eval proc=lower(Image), parent=lower(ParentImage) where match(proc, "(rundll32 regsvr32 msiexec certutil bitsadmin mshta wmic powershell)\.exe") stats count values(parent) as parents by proc, host sort -count	A short, predictable list. Anything outside it is a lead.
1	Initial execution T1059 / T1204	index=sysmon EventCode=1 eval parent=lower(ParentImage), proc=lower(Image) where match(parent,"(powershell wscript cscript mshta)\.exe") AND match(proc,"(rundll32 regsvr32 certutil bitsadmin msiexec)\.exe") stats count by _time, host, ParentImage, Image, CommandLine sort -count	powershell -> rundll32/certutil/bitsadmin on BS-WS-OPS-07. Same query catches ClickFix (explorer -> powershell).
2	C2 beaconing T1071 / T1572	index=dns valdoris src=10.10.7.208 search raw="*Rcv*" sort 0 _time streamstats current=f last(_time) as prev by src eval interval = _time - prev where interval >= 200 AND interval <= 290 stats count avg(interval) as avg_beacon stdev(interval) as jitter by src eval jitter_pct = round(jitter/avg_beacon*100,1)	avg_beacon ~240s, jitter_pct < 20 from BS-WS-OPS-07.
3	Creds & persistence T1003.001 / T1547 / T1053	index=sysmon EventCode=10 TargetImage="*\lsass.exe" where GrantedAccess IN ("0x1010","0x1410","0x1438","0x143a","0x1f1fff","0x1fffff") search NOT SourceImage IN ("*\MsMpEng.exe","*\CSFalconService.exe") stats count by ComputerName, SourceImage, GrantedAccess, CallTrace	rundll32 reads lsass on BS-WS-OPS-07. Pair with ev=13 (Run key) + ev=4698 (task).
4	Full-chain timeline T1021 / T1074 / T1560 / T1048	union search covering all phases of the attack (full SPL in workbook, Exercise 4)	Chronological chain: creds -> schtasks -> robocopy -> encode -> upload.
5	Build a detection PEAK Act / RBA	(Hunt 1 SPL) stats count min(_time) as firstTime by ComputerName, ParentImage, Image, CommandLine Save As > Alert; add risk annotation (risk_object=ComputerName, risk score=40, MITRE T1059)	A risk-scoring detection, not a page per certutil. RBA aggregates weak signals.

Key event codes

Source	Code	What it captures
Sysmon	1	Process Create — image, CommandLine, ParentImage, hashes
Sysmon	3	Network Connection — src/dst, port, process
Sysmon	10	Process Access — GrantedAccess mask (LSASS)
Sysmon	11	File Create — staged archives, dump files
Sysmon	13	Registry Value Set — Run keys, service config
Sysmon	22	DNS Query — QueryName, process
WinEvent	4624	Logon (with LogonType)
WinEvent	4648	Explicit Credential Use — net use / runas
WinEvent	4698	Scheduled Task Created
WinEvent	5140	Network Share Access — lateral pivot
WinEvent	4104	PowerShell Script Block
WinEvent	4688	Process Create (Security)

GrantedAccess masks (LSASS)

0x1010 Mimikatz 0x1410 / 0x1f1fff ProcDump / comsvcs

0x1fffff full access. Highest fidelity: CallTrace with an UNKNOWN / unbacked module.

PEAK Prepare (baseline) -> Execute (hunt) -> Act (detect). Knowledge threads through all three.

RBA Aggregate low-fidelity LotL signals into one high-fidelity finding. 50-90% fewer alerts.

The abusable toolset, mapped to MITRE ATT&CK

Native tool	How it is abused	ATT&CK technique	ID
PowerShell	Scripting, download-and-execute, in-memory execution, remote admin	Command & Scripting Interpreter	T1059.001
WMI / wmic	Remote command execution, discovery, event-subscription persistence	Windows Management Instrumentation	T1047
certutil	Download payloads; encode/decode files to evade content inspection	Ingress Tool Transfer	T1105
bitsadmin	Stealthy file transfer via Background Intelligent Transfer Service	Ingress Tool Transfer	T1105
rundll32	Proxy execution of malicious DLLs and exported functions	System Binary Proxy Execution	T1218.011
regsvr32	Register and execute COM scriptlets, including from remote URLs	System Binary Proxy Execution	T1218.010
mshta	Execute HTA files containing malicious script	System Binary Proxy Execution	T1218.005
comsvcs.dll	Dump LSASS memory (MiniDump) via rundll32 to harvest credentials	OS Credential Dumping: LSASS	T1003.001
schtasks	Create scheduled tasks for persistence or execution	Scheduled Task / Job	T1053.005
Psexec / WMI	Execute commands on remote hosts for lateral movement	Remote Services / SMB	T1021
net, reg, robocopy	Account and share discovery, registry edits, bulk data staging	Discovery / Data Staging	T1087 / T1074
